### What this standard covers

This standard specifies the use of UV spectrophotometry aviation turbine fuel naphthalene, method acenaphthene, and their alkyl derivatives (naphthalene hydrocarbons, the same below) content. This standard applies to determination of the final boiling point no higher than 315°C aviation turbine fuel volume fraction of not more than 5% of the naphthalene hydrocarbon content.

### Document data

International classification (ICS): 75.160.20.

Chinese classification (CCS): E31.

Estimated length of the Chinese original: 885 words.

Adopted international standard: ASTM D1840-2007, IDT.

### Standards quoted by this document
