### What this standard covers

This standard specifies the inductively coupled plasma atomic export of lead antimony, iron, copper, arsenic, selenium, bismuth, cadmium, mercury content in emission spectrophotometric method. This standard applies to lead, iron, copper, arsenic, selenium, bismuth, cadmium, mercury content was measured antimony trioxide, the measurement range of each element in Table 1.

### Document data

Chinese classification (CCS): H62.

Estimated length of the Chinese original: 7,754 words.
