What this standard covers

This standard specifies the determination method and technical requirements for the determination of the wettability of reservoir rocks by self-priming, centrifugation and contact angle methods. The self-priming and centrifugation methods of this standard are applicable to the determination of the wettability of reservoir rocks. The contact angle method of this standard is applicable to the simulation of the wettability of reservoir rocks on typical ore plates.

Document data

International classification (ICS): 75.020.

Chinese classification (CCS): E12.

Estimated length of the Chinese original: 14,191 words.

Supersedes the earlier edition SY/T 5153-2007.
