What this standard covers

This standard specifies the determination method and quality requirements for clay particle content of less than 5 μm in sandstone and carbonate rock and less than 2 μm in mud shale. This standard applies to the determination of clay particle content in sedimentary rocks. This standard does not apply to the determination of shale samples that cannot be dispersed by immersion.

Document data

International classification (ICS): 75-010.

Chinese classification (CCS): E11.

Estimated length of the Chinese original: 8,898 words.

Supersedes the earlier edition SY/T 5408-1991.
