What this standard covers

This standard specifies the technical methods and quality requirements for the quantitative analysis of the elements and chemical constituents of rock minerals by X-ray energy spectrometers configured on scanning electron microscopes or electron probe analyzers. This standard applies to the quantitative analysis of rock mineral elements and chemical components.

Document data

International classification (ICS): 75-010.

Chinese classification (CCS): E11.

Estimated length of the Chinese original: 7,740 words.

Supersedes the earlier edition SY/T 6189-1996.
