What this standard covers

This standard specifies the technical requirements for the basic functions, power supply, physical connection, transmission control and performance indicators of land seismic exploration digital detectors (hereinafter abbreviated as digital detectors). This standard applies to the design, development, application and testing of digital detectors. The application and detection of digital detectors that are not designed and manufactured in accordance with this standard can be implemented by reference.

Document data

International classification (ICS): 75.180.10.

Chinese classification (CCS): E11.

Estimated length of the Chinese original: 51,521 words.
