What this standard covers

This standard specifies guidelines for the design, construction, testing, operation and maintenance of offshore steel pipelines for production, production support or oil and gas transportation. This standard applies to pipelines and offshore water injection pipelines that transport oil, gas, and oil and gas mixtures. It is also applicable to any pipeline transportation equipment downstream of the separation and treatment facilities on the production platform, including metering equipment, gas compression equipment, and liquid pressurization. Pump related piping and accessories.

Document data

International classification (ICS): 75.180.10.

Chinese classification (CCS): E94.

Estimated length of the Chinese original: 56,512 words.

Adopted international standard: API RP 1111-2015, IDT.
