What this standard covers

This standard specifies the laboratory evaluation method for elastic materials in a static acidic environment. This section applies to the exposure corrosion test of elastic materials in acidic gas phase or acidic liquid phase corrosion environment, as well as the performance change test before and after. It is not applicable to the functional test of elastic materials, nor to the evaluation of sponge rubber or porous materials.

Document data

International classification (ICS): 75.020.

Chinese classification (CCS): E04.

Estimated length of the Chinese original: 11,132 words.
