What this standard covers

This standard provides guidance on the investigation procedures and work content of soil pollution status in land-based petroleum exploration areas. This standard is applicable to the investigation of the soil pollution status of the processing stations (joint stations), purification plants, oil depots and solid waste storage sites, treatment and disposal sites that are in production, closed and decommissioned by onshore oil and gas mining enterprises, accident sites, and historical relics. The investigation of the soil pollution status of contaminated plots and other plots can be used as a reference.

Document data

International classification (ICS): 75.010.

Chinese classification (CCS): E20.

Estimated length of the Chinese original: 25,281 words.
