What this standard covers

This standard specifies the determination of the specific heat capacity of crude methods. Method A of this standard adiabatic calorimetry method is applicable to a variety of crude oil from 273K to the initial boiling point temperature zone specific heat capacity measurement. Method B of this standard differential scanning calorimetry (DSC) for a variety of crude oil from 273K to the initial boiling point temperature zone Rapid Determination of specific heat capacity.

Document data

International classification (ICS): 75.010.

Chinese classification (CCS): E10.

Estimated length of the Chinese original: 14,124 words.

Supersedes the earlier edition SY/T 7517-1992.
