Foreword

TB/T 30073-2026 is a recommended industry standard of the People's Republic of China in the Railway sector, approved and issued by the National Railway Administration on 27 February 2026, with effect from 1 September 2026.

It is administered by the Energy Saving, Environmental Protection and Occupational Safety and Health Research Institute, China Academy of Railway Sciences Corporation Limited.

Classification: ICS 45.020; CCS S09.

1 Scope

TB/T 30073-2026 is a management code for the health examination of railway personnel who work on the plateau, that is, at high altitude. It lays down how medical checks for these workers are organized and carried out, so that people assigned to railway work in plateau areas are examined for fitness for that work.

It is used by railway operators and construction organizations employing staff at altitude, by occupational health departments and medical examination institutions, and by human resources and safety managers. The standard is voluntary, as the code carries the /T mark. It was approved by the National Railway Administration, with the Energy Saving, Environmental Protection and Occupational Safety and Health Research Institute of the China Academy of Railway Sciences in charge. It was issued on 27 February 2026 and takes effect on 1 September 2026. It is a new standard.
