What this standard covers

This standard specifies the methods of measurement railway integrated grounding system of terms and definitions, general provisions, soil resistivity measurement methods, the independent grounding grounding resistance measurement method, the railway integrated grounding system electrical integrity measurement method, the railway integrated earthing system impedance measurement method, the field of surface potential gradient step and touch voltage measurement method, the railway track potential integrated grounding system potential measurement methods and devices.

Document data

International classification (ICS): 29.280.

Chinese classification (CCS): S81.

Estimated length of the Chinese original: 40,433 words.

Adopted international standard: ANSI/IEE 81-1983, NEQ.
