What this standard covers

This standard specifies the reference method for detecting the minimum inhibitory concentration (MIC) of anti-yeast-like fungi using the classic macrodilution method (Broth Macrodilution method), and recommends the Broth Microdilution method (Broth Microdilution method) with good consistency with the results of this reference method. This standard applies to drug sensitivity tests for yeast-like fungi that cause infections (including some species of *Candida* spp. and some species of *Cryptococcus* spp.), and recommends broth dilution tests for some related antifungal drugs.

Document data

International classification (ICS): 11.020.

Chinese classification (CCS): C50.

Estimated length of the Chinese original: 32,329 words.

Supersedes the earlier edition WS/T 421-2013.
