What this standard covers

This standard specifies the basic functional requirements for hospital infection management information systems, including hospital infection monitoring requirements, monitoring requirements for high-infection-occurrence sites, high-risk departments, and high-risk populations, occupational exposure monitoring requirements for infectious diseases among hospital staff, and disinfection and sterilization effectiveness monitoring requirements. This standard applies to the design, development, and application of hospital infection management information systems in medical institutions with inpatient beds.

Document data

International classification (ICS): 11.020.

Chinese classification (CCS): C07.

Estimated length of the Chinese original: 7,752 words.

Supersedes the earlier edition WS/T 547-2017.
