What this standard covers

This standard specifies the method for determining the content of silicon dioxide, calcium oxide, magnesium oxide, aluminum oxide, phosphorus pentoxide, total iron and manganese oxide in continuous casting protective slag by inductively coupled plasma atomic emission spectrometry. This standard is applicable to the determination of silicon dioxide, calcium oxide, magnesium oxide, aluminum oxide, phosphorus pentoxide, total iron and manganese oxide in continuous casting mold slag.

Document data

International classification (ICS): 73.080.

Chinese classification (CCS): D52.

Estimated length of the Chinese original: 13,133 words.
