What this standard covers

This standard specifies the inductively coupled plasma atomic emission spectrometry determination of aluminum, barium, iron, calcium, manganese, copper, chromium, nickel and phosphorus measurement method. This standard applies to silicon lock aluminum, calcium, barium and calcium barium aluminum elements listed in Table 1 of the determination of measurement range (mass fraction) are shown in Table 1.

Document data

International classification (ICS): 77.100.

Chinese classification (CCS): H11.

Estimated length of the Chinese original: 11,122 words.
