1 Foreword

YB/T 4306-2012 is issued by Ministry of Industry and Information Technology.

The YB/T prefix marks a recommended standard. It is not law in itself: it becomes binding when a contract names it, when a regulation or a mandatory standard refers to it, or when a producer declares conformity with it.

The document runs to 8 pages in English translation.

2 Scope Preview

This standard specifies the inert gas fusion thermal conductivity method for the determination of nitrogen content in steel. This standard applies to steel and alloy mass fraction of 0. 0008% to 0. 5% nitrogen content.

YB/T 4306-2012 falls under ICS 77.080.01, in the field of metallurgy.

This catalogue holds 971 other YB/T standards in that field.

In this catalogue, YB/T standards carry edition years from 1980 to 2026.

3 Normative references

4 About this standard

Issued by: Ministry of Industry and Information Technology

English translation: about 8 pages (approximate)

5 Related standards

Standards on related subjects:

GB/T 3654.3-2019 - Ferroniobium-Determination of silicon content-Gravimetric method

GB/T 4336-2016 - Carbon and low-alloy steel-Determination of multi-element contents-Spark discharge atomic emission spectrometric method (routine method)

GB/T 4701.1-2009 - Ferrotitanium - Determination of titanium content - The ammonium ferric sulfate titration method

YB/T 4307-2012 - Iron, steel and alloy. Determination of oxygen, nitrogen and hydrogen contents. TOF-mass spectroscopy method after fusion in a current of inert gas(Routine method)

YB/T 4305-2012 - Steel, iron and alloy. Determination of oxygen content. Infrared method after fusion under inert gas

YB/T 4302-2012 - Determination of oil and iron remainders on cold rolled plate and strip surface

6 Classification and status

International classification (ICS): 77.080.01

Chinese Standard Classification (CCS): H 11

Prefix YB/T: recommended standard.
