What this standard covers

This standard specifies the principle, instrument and equipment, sampling, analysis steps, calculation of analytical results, etc. for the determination of water content and oil content of rolled steel scale by thermogravimetry. This standard applies to the determination of water content and oil content of rolled steel scales. Water content measurement range (mass fraction): 0.50% to 45.00%; dry oil content measurement range (mass fraction): 0.10% to 30.00%.

Document data

International classification (ICS): 77.140.99.

Chinese classification (CCS): H34.
