What this standard covers

This standard specifies the measurement range, principle, equipment and reagents, sample preparation, analysis steps, calculation of results, test reports, etc. for the determination of iron content in steel slag by ferric chloride-potassium dichromate titration. This standard applies to the determination of metal iron content in steel slag, the measurement range (mass fraction): 0.10% ~ 10.00%.

Document data

International classification (ICS): 77.140.99.

Chinese classification (CCS): H34.

Estimated length of the Chinese original: 6,698 words.

Supersedes the earlier edition YB/T 140-2009°.
