What this standard covers

This standard specifies the terms and definitions, energy consumption quota levels, technical requirements, statistical scope and calculation methods, and energy-saving measures for the energy consumption per unit product of hot-rolled steel strip (hereinafter referred to as the energy consumption per unit). This standard applies to the calculation and assessment of energy consumption per unit product of hot-rolled steel strip and the energy consumption control of new projects, excluding steel strip produced by the thin slab continuous casting and rolling process.

Document data

International classification (ICS): 77-010.

Chinese classification (CCS): H04.

Estimated length of the Chinese original: 5,568 words.
