What this standard covers

This Standard specifies the determination of calcium oxide content by flame atomic absorption spectrometry and EDTA titration. This Standard applies to the determination of vanadium slag calcium oxide content. Flame atomic absorption range (mass fraction)

Document data

International classification (ICS): 77.100.

Chinese classification (CCS): H11.

Estimated length of the Chinese original: 12,195 words.

Supersedes the earlier edition YB/T 547.3-1995.
