What this standard covers

This standard specifies the general requirements for ultrasonic testing of die steel, comparative test blocks, testing instruments and equipment, testing conditions and methods, defect determination, quality classification and testing reports. This standard applies to manual and automatic ultrasonic testing of longitudinal wave direct incident reflection method for die steels with a thickness not less than 6mm. Ultrasonic testing of round bar die steel and other non-die steel forgings, plates, etc. can refer to this standard.

Document data

International classification (ICS): 77.140.20.

Chinese classification (CCS): H26.
