What this standard covers

This standard specifies the principle, instruments and equipment, reagents, sampling preparation, analysis steps, result calculation, precision and test report for the determination of calcium oxide content in steel slag by EDTA titration method. This standard applies to the determination of calcium oxide content in steel slag. Measuring range (mass fraction): 20.0% to 60.0%.

Document data

International classification (ICS): 77.140.99.

Chinese classification (CCS): H34.

Estimated length of the Chinese original: 11,190 words.
