What this standard covers

This standard specifies the determination of calcium, aluminum, chromium, manganese, titanium and phosphorus content by inductively coupled plasma atomic emission spectrometry. This document applies to the determination of calcium, aluminum, chromium, manganese, titanium and phosphorus in ferrosilicon nitride. The determination range (mass fraction) of calcium, aluminum, chromium and manganese: 0.010% to 2.00%, the determination range (mass fraction) of titanium and phosphorus: 0.010% to 0.20%.
