What this standard covers

This standard specifies the method for determining the content of tantalum, phosphorus, aluminum, titanium and other elements in ferroniobium using inductively coupled plasma optical emission spectrometry. This standard is applicable to the determination of tantalum, phosphorus, aluminum and titanium elements in ferroniobium.

Document data

International classification (ICS): 77.100.

Chinese classification (CCS): H11.

Estimated length of the Chinese original: 15,147 words.
