What this standard covers

This standard specifies the principle, specimen, measurement steps, calculation, numerical rounding, and test report of the tensile stress test method of the coating of oriented electrical steel on the substrate. This standard is applicable to oriented electrical steel strips (sheets) with a nominal thickness of 0.15mm to 0.35mm. Electrical steel strips (sheets) of other specifications can be used for reference.

Document data

International classification (ICS): 77.140.99.

Chinese classification (CCS): H21.
