### What this standard covers

This standard specifies the principle, specimens, measurement devices, test procedures, result processing and test reports for the determination of residual stress in metal pipes by the ring cutting opening displacement method. This standard applies to the determination of circumferential residual stress in circular seamless pipes and straight seam welded pipes.

### Document data

International classification (ICS): 77.040.10.

Chinese classification (CCS): H22.

Estimated length of the Chinese original: 12,157 words.
