What this standard covers

This standard specifies the general requirements, detection equipment, comparison test blocks, guided wave mode selection, detection methods and defect assessment, detection records and reports for ultrasonic guided wave detection of round steel. This standard applies to the detection of radial surface and internal defects of round steel (bars and wires) with a diameter of 5mm to 20mm.

Document data

International classification (ICS): 77.040.20.

Chinese classification (CCS): H26.

Estimated length of the Chinese original: 22,221 words.
