What this standard covers

This standard specifies the method for determining the content of vanadium, titanium, chromium, calcium, magnesium, aluminum, silicon, manganese and phosphorus in high-chromium vanadium-titanium magnetite by wavelength dispersive X-ray fluorescence spectrometer. This standard applies to the determination of the content of 9 components in high-chromium vanadium-titanium magnetite.

Document data

International classification (ICS): 73.060.10.

Chinese classification (CCS): D31.

Estimated length of the Chinese original: 11,195 words.
