What this standard covers

This standard specifies the requirements and test methods, inspection rules, as well as marking, packaging, transportation and storage of composite conductive slurries containing graphene-related two-dimensional materials. This standard applies to new energy fields such as lithium-ion batteries, and the quality inspection and specification of conductive slurries that are mainly based on graphene-related two-dimensional materials and add carbon nanotubes or other materials with certain functions as conductive media, and use N-methylpyrrolidone or water as solvents.

Document data

International classification (ICS): 59.100.20.

Chinese classification (CCS): Q51.

Estimated length of the Chinese original: 21,246 words.
