What this standard covers

This standard specifies the method for determining the potassium and sodium content in manganese ore and manganese concentrate by flame atomic emission spectrometry. This standard applies to the determination of potassium and sodium content in manganese ore and manganese concentrate, with a determination range (mass fraction) of 0.050% to 4.00% for potassium and 0.020% to 1.00% for sodium.

Document data

International classification (ICS): 73.060.20.

Chinese classification (CCS): D32.

Estimated length of the Chinese original: 14,152 words.
