What this standard covers

This standard specifies the method summary, instruments and reagents, test procedures, result calculation and test reports for determining the ash content of graphene-related two-dimensional materials by combustion method. This standard applies to the determination of ash content of graphene-related two-dimensional materials such as graphene oxide, reduced graphene oxide and graphene in powder and slurry form. The determination of graphene oxide ash content can be referenced in this standard.

Document data

International classification (ICS): 59.100.20.

Chinese classification (CCS): Q51.

Estimated length of the Chinese original: 12,197 words.
