What this standard covers

This standard specifies the test methods for Ethernet switches, including functional test, performance test, protocol test and routine test, etc. In this standard, an Ethernet switch refers to a LAN switch with an Ethernet interface, and all unspecified switches that appear below refer to an Ethernet switch. This standard applies to Ethernet switches working on the second layer of the data link layer in the ISO OSI7 layer reference model. Ethernet switches working on the third layer or higher are not within the scope of this standard. This standard applies to manageable network equipment, and non-network management equipment is not within the scope of this standard.

Document data

Chinese classification (CCS): M32.

Estimated length of the Chinese original: 70,776 words.

Supersedes the earlier edition YD/T 1141-2007.
