What this standard covers

This standard specifies the system composition, monitoring content, system management, hardware configuration, software functions, system maintenance and other requirements of the centralized monitoring and management system for power supply, air conditioning and environment of a communication bureau (station). This standard is applicable to the centralized monitoring and management system for communication power supply, air conditioning and environment set up separately by the communication bureau (station), as well as the monitoring system networks of different sizes formed on this basis. When dry contact transmission provided by communication network elements is used for monitoring system networking, in addition to the transmission networking method, other functions should comply with the provisions of this standard.
