What this standard covers

This standard specifies the open two-fiber bidirectional CWDM system testing methods, including the respective reference point CWDM system optical performance parameters, protection switching methods, guidelines and protection switching time, the system transmission performance, sub-rate transparent multiplexer functionality and performance optical path performance monitoring, network element management system functional testing specific content. This standard will not consider the case OADM configuration. This standard applies to CWDM system testing. For the corporate network and other network edge applications, the test content and projects can be adjusted depending on the circumstances.

Document data

International classification (ICS): 33.180.10.

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 27,216 words.
