### What this standard covers

This standard specifies the protocol ISDN User Part (ISUP) and Session Initiation Protocol (SIP) and the SIP protocol associated with the Session Description Protocol (SDP) signaling interworking between the technical requirements. This section describes only the ISUP and SIP interworking involved in the procedures, methods and information unit (message, parameter indicating the language, header fields, etc.). This section applies to ISUP and SIP protocol interworking scenarios, has only local significance (for example, and only a single signaling system, such as SIP or ISUP related) procedures, methods and information unit does not belong to the scope of the provisions of this part.

### Document data

Chinese classification (CCS): M21.

Estimated length of the Chinese original: 52,538 words.
