What this standard covers

This standard specifies the transition from IPv4 networks to IPv6 networks used in a variety of interworking with the transition of technologies, including dual-stack, tunneling and translation conversion technology. IPv4 to IPv6 transition involves a wide range of content, this standard is mainly applied to the IPv4 network and IPv6 network interoperability. This standard does not address the current immature technology transition technologies.

Document data

International classification (ICS): 33.040.40.

Chinese classification (CCS): L78.

Estimated length of the Chinese original: 85,841 words.
