What this standard covers

This standard specifies the technical framework for IP Fast Reroute, including IP Fast Reroute problem analysis and implementation mechanisms. This standard applies to IP packet-switched network domain IGP link state routing protocol. Provides fast reroute reserved for future research on -site non- link-state routing domain IGP and BGP, and the correct address for the purpose of repair mechanisms outside the IGP traffic is an important framework based on all the programs that should be considered aspects.

Document data

International classification (ICS): 33.030.

Chinese classification (CCS): M21.
