What this standard covers

This standard specifies the definition and QoS requirements of carrier-grade IP services and IP QoS architecture to control and bearer network resource management as the core, interface model and the corresponding QoS control processes. This standard applies to our carrier-grade IP networks for network operators meeting ranging from network edge devices to the edge devices, including access network and the core network, the user is no longer resident within the provisions of the square structure, but in some cases under this framework can be used with the appropriate configuration required to do in order to get a true end to end QoS guarantees.

Document data

International classification (ICS): 33.040.

Chinese classification (CCS): M15.

Estimated length of the Chinese original: 17,119 words.

Adopted international standard: ITU-T Y.1541, NEQ; ITU-T SG13, NEQ.
