What this standard covers

This standard specifies the different operators softswitch network interworking Interworking between softswitch and media gateway device interoperability technical requirements. These include: network architecture, interoperability softswitch equipment technical requirements (including functional requirements, interface and protocol requirements, performance indicators, timing and synchronization requirements, traffic statistics and network management requirements, operation and maintenance requirements, billing requirements, hardware requirements, software requirements, environmental requirements, power and grounding requirements), exchanging media gateway equipment technical requirements (including functional requirements, interface and protocol requirements, performance indicators, timing and synchronization requirements, traffic statistics and network management requirements, operation and maintenance requirements, hardware requirements, software requirements, environmental requirements, power and grounding requirements). This standard applies to operators, maintenance and management softswitch interoperability and interworking media gateway device. In this standard, the mobile softswitch network operators especially TD-SCDMA/WCDMA mobile softswitch (R4 circuit domain) networks and cdma2000 digital cellular mobile communication network, the traditional terminal domain (LMSD) mobile softswitch network, and will be fixed softswitch softswitch network device called a fixed softswitch, will TD-SCDMA/WCDMA mobile softswitch network MSC Server, cdma2000 digital cellular mobile communication network of traditional terminal domain (LMSD) mobile softswitch network MSCe collectively referred to as mobile softswitch, the fixed and mobile softswitch softswitch softswitch collectively.

Document data

International classification (ICS): 33.040.01.

Chinese classification (CCS): M19.

Estimated length of the Chinese original: 32,360 words.
