What this standard covers

This standard specifies the Ethernet user network interface (UNI) network node interface (NNI), including Ethernet transport network interface architecture (including UNI and NNI reference point, the reference model and the basic signal structure and the information structure ETH interface and MAC address, labels, etc.), multiplexing/mapping standards, Ethernet interface physical norms. This standard applies to IEEE 802. 3 Ethernet interface as well as series of prescribed transmission network carrying Ethernet (EoT) interface.

Document data

International classification (ICS): 33.040.20.

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 33,342 words.

Adopted international standard: ITU-T G.8012-2005, NEQ.
