What this standard covers

This standard specifies the Ethernet services framework to describe the properties of a series of Ethernet services, including Ethernet service types, Ethernet virtual connection types and attributes, Ethernet user network interface (UNI), Ethernet Network a network interface (NNI) and Ethernet business performance. This standard applies to synchronous digital hierarchy (SDH), Multi-Protocol Label Switching (MPLS), quasi-synchronous digital hierarchy (PDH), Ethernet physical layer network (ETY) or the optical transport system (OTH) and other Ethernet network bearer service layer services, other telecommunications network technology can also refer to the use.

Document data

International classification (ICS): 33.040.20.

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 36,334 words.

Adopted international standard: ITU-T G.8011, NEQ; MEF 10.1, NEQ.
