What this standard covers

This standard specifies the requirements for size parameters, transmission characteristics, mechanical properties and environmental performance of bending loss-insensitive single-mode optical fibers used in communication optical cables and other information transmission equipment, and describes the corresponding test methods and rounding rules. This standard applies to the design, development, production and testing of B6 single-mode optical fibers.

Document data

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 15,138 words.

Supersedes the earlier edition YD/T 1954-2013.
