What this standard covers

This standard specifies the protection device and the multiplexer between 2048kbit/s optical interface frame structure, and clear guidelines for disclosure of signal loss, jitter and wander tolerance limits, optical interface parameters, and relay protection devices and complex multiplexer on communications failure processing and communication clock timing technical requirements. This standard applies to public telecommunication network dedicated telecommunications network using multiplexer 2048kbit/s optical interfaces, and the need for dedicated telecommunications network through a public telecommunication network or transferring data signal relay equipment 2048kbit/s optical interfaces.

Document data

International classification (ICS): 33.040.20.

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 12,128 words.
