### What this standard covers

This standard specifies guidelines for mitigation techniques to limit electromagnetic radiation around communication base stations, especially in multi-source environments. This standard applies to examining the electromagnetic field around transmitting base stations, such as the electromagnetic field around the location of transmitting antenna installations. Telecommunications operators can refer to this standard to ensure that wireless communication transmission systems meet environmental electromagnetic radiation protection requirements.

### Document data

International classification (ICS): 33.100.

Chinese classification (CCS): M04.

Supersedes the earlier edition YD/T 2192-2010.
