What this standard covers

This standard specifies the 900/1800MHz TDMA digital cellular mobile communication network covering the analog repeater and repeater systems into communications repeater monitoring system south to the interface functional requirements, data requirements, contents of the technical requirements and transmission protocols. This standard applies to 900/1800MHz TDMA digital cellular mobile communication network simulation repeater equipment, repeater master-slave system, and repeater -based indoor, outdoor distribution system network management interface. Indoor distribution system for mobile communication network base station subsystem management center are not included, tower discharge, base station amplifiers and other similar products may also refer to the use of normative references.

Document data

International classification (ICS): 33.060.20.

Chinese classification (CCS): M36.

Estimated length of the Chinese original: 82,860 words.
