What this standard covers

This standard specifies electromagnetic interference test methods and related technical requirements between GSM, TD-SCDMA, WCDMA, CDMA and LTE cellular radio modules and wireless LAN modules in multimode mobile terminals. This standard applies to all wireless terminals that are equipped with both cellular wireless modules and wireless LAN modules, including wireless terminals for portable and in-vehicle use, as well as wireless terminals that are powered by AC power and used in fixed locations and through USB interfaces. Interfaces such as the Express interface and the PCMCIA interface are connected to the data device of the portable computer.

Document data

Chinese classification (CCS): M04.

Estimated length of the Chinese original: 15,174 words.

Supersedes the earlier edition YD/T 2436-2012 (2017).
