What this standard covers

This standard specifies the testing and evaluation methods for data centers in terms of energy consumption, analyzes the energy consumption structure of data centers, specifies the energy efficiency indicators of data centers, specifies the energy consumption measurement methods for data centers and the requirements for publishing energy efficiency data. This standard is applicable to the measurement of energy consumption and the calculation of energy efficiency of data centers, and is used to understand the energy efficiency status of data centers, compare the energy efficiency between different data centers and serve as the basis for rating the energy saving level of data centers.

Document data

International classification (ICS): 33.040.40.

Chinese classification (CCS): M32.

Estimated length of the Chinese original: 14,192 words.

Supersedes the earlier edition YD/T 2543-2013.
