What this standard covers

This standard specifies the electromagnetic compatibility (EMC) requirements for mobile stations (MS) and their ancillary equipment for the first and second phases of the GSM 900 MHz and DCS 1800 MHz digital cellular communication systems for transmitting and receiving voice and/or data, including measurements. Method, frequency range, limits, and performance criteria. This standard applies to mobile stations for portable and in-vehicle use. It is also suitable for mobile stations that use power and are used in fixed locations. It is also suitable for data terminal equipment of various GSM 900MHz and DCS 1800MHz digital cellular communication systems.

Document data

Chinese classification (CCS): M04.

Estimated length of the Chinese original: 29,287 words.

Supersedes the earlier edition YD/T 1032-2000.
