What this standard covers

This standard specifies the various security service capabilities that organizations that provide third-party security services for telecommunications networks and the Internet should have. This standard is applicable to guiding third-party assessment and certification agencies to conduct third-party security service capability assessments, and can be used as a basis for relevant national authorities to conduct supervision and management, and for telecommunications operators to select third-party service organizations. It can also be used as a guide for third-party security service providers to improve their own capabilities.

Document data

International classification (ICS): 33.240.

Chinese classification (CCS): M21.

Supersedes the earlier edition YD/T 2669-2013.
